Go to Environments tab

Define Environments cpu & ram

Connect to the Environment
Type jupyter notebook

Right-click on the last http:// adress, and «Open»
Go to the notebooks folder

You’re good to GO!

some notes
0. Open the Jupyter notebook in a different window.
1. Run the first cell below and wait for Qt to be initialized before running the following cells.
2. Not all cells will work.

In [3]: # Run the first cell to create the file
In [4]: # Some notes to write to the zip file

Image
From the website: [brainreg](https://doi.org/10.5281/zenodo.3982374), we have access to a `test.csv` file.
